

CryoRoller

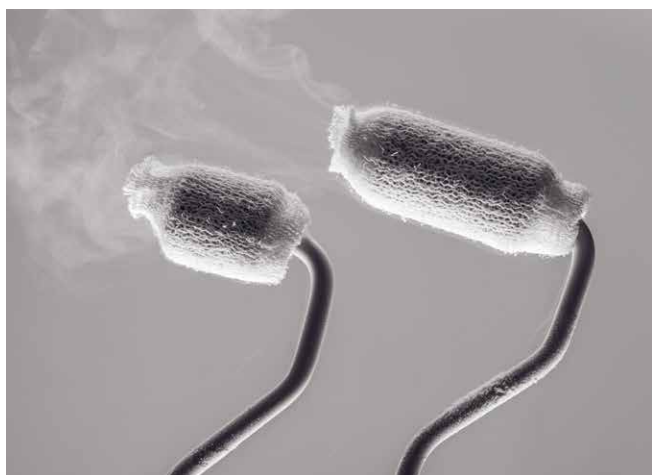

Cryotherapy Instrument for use in Cosmetology (Cryomassage)

CryoMassage Now Becomes Innovative&Comfortable

CryoRoller is the rolling metal cylinder set on the stainless steel handle. Cylinder is made of titanium nickelide, porous material with unique characteristics.

Being immersed into the liquid nitrogen the roller quickly cools down to the temperature of -196°C . Due to the porous structure the instrument absorbs sufficient volume of liquid nitrogen which during procedure gently evaporates from the surface of the roller. Thus it is not necessary to immerse it repeatedly into liquid nitrogen to keep required low temperature of the working surface. Thanks to persistently low temperature of the surface of the CryoRoller its cryomassage properties are superior than of traditional instruments.

Simple, reliable and easy-to-use CryoRoller will become your true assistant in cryomassage procedures in beauty salons and aesthetic clinics.

CryoRollers with different working surface to do massage of face, neck, decollate, and others zones of the body

Complete set of equipment for cryomassage procedure

CryoRoller

Cryotherapy Instrument for use in Cosmetology (Cryomassage)

The regenerative and anti-inflammatory power of cold has been known for a very long time. Today this effect is widely used in medicine and beauty practice. Cosmetologists and dermatologists actively use it, and therefore cryotherapy is very popular in beauty salons and aesthetic clinics.

The Nature of CryoMassage

CryoMassage is an instrumental cosmetic procedure based on the short-term exposure of cold to skin, which improves peripheral blood circulation and accelerates metabolic processes. The "source" of cold during massage is liquid nitrogen, which long has been used in medicine and today is widely used in beauty industry.

Indications

- * if your skin has lost its stiffness and looks tired,
- * if you find fine lines on your face,
- * if your skin looks pale due to poor blood circulation,
- * if you have enlarged pores and excessive oil secretion,
- * if you feel uneasy about the face edema after surgery, then...

CryoMassage is All You Need

CryoMassage is a proven mean of skin care and prevention of aging. Like peeling it helps to exfoliate the superficial layers of the epidermis and formate healthy cells. CryoMassage normalizes the work of the sebaceous glands, relieves inflammation, itching and swelling, restores microcirculation, triggers metabolic processes and immune mechanisms. After cryomassage the face "wakes up", becomes fresh, as if glowing from within. And on top of all the effect is tangible after the first procedure.

CryoRoller is a modern looking and aesthetically pleasing cryoinstrument. All this makes the cryomassage procedure effective and pleasant, more comfortable for the client and the therapist.
